AB A system of regression equations related to mol. structures and developed from literature data on 156 compds. The prognostic value of the equations for the prediction of coccidiostatic activities was tested on 13 compds. and on diclazaril, an established anticoccidial agent. The results suggested the existence of new coccidiostats in the group of triazinedione derivs.

DOCUMENT TYPE: Journal LANGUAGE: English

AB Comparative mol. field anal. (CoMFA) of 2-(substituted phenyl)-1,2,4-triazine-3,5(2H,4H)-diones (triazines henceforth) resulted in an excellent correlation of their anticoccidial potencies with their phys. properties. Two items about this work are notable: (i) the biol. data are from a whole nimal infectious disease model; and (ii) for the best results CoMFA required columns of measured "lipophilicity" and "acidity" data in addition to the calculated data in the steric field and electrostatic field columns. CoMFA resulted in a quant. description of the major steric and electrostatic field effects, and gave significant new insights to factors governing potency. The model was used to predict the potencies of diverse triazines not used in making the model itself.

$$0 = \bigvee_{N = 0}^{R} N - \bigvee_{N = 0}^{R} s(0)_{n} X$$

Thirty-nine 6-azauracils I (R and R1 = H, Cl, Me, etc.; X = Me or AB substituted phenyl; n = 0-2) were synthesized and tested for anticoccidial activity. These compds. prevented a broad spectrum of coccidial infections in chickens at a min. inhibitory concns. by weight in feed as low as 0.25 ppm, a 4000-fold increase in potency over 6-azauracil, and had shorter plasma half-lives than earlier potent analogs. Sulfides were more potent than sulfones, although they were oxidized rapidly to sulfones in vivo. I (R = R1 = Me; X = C6H4Cl-p; n = 0) [35319-70-1] controlled all the major species of poultry coccidia at low concns., but elicited toxicol. symptoms suggesting interference with nucleic acid synthesis.

Forty-eight title compds. I (R = H, substituted Ph, or heterocyclic ring; AB R1 = H or Me; R2 = H or Ph) were synthesized, and their anticoccidial potency were determined in chickens. Maximum effects occurred with Ph rings substituted in both meta positions by compact electron-withdrawing lipophilic substituents; for example, 1-(3,5-dichlorophenyl)-6-azauracil [57715-70-5], had a plasma life of 160 h and a potency 250-fold greater than that of 6-azauracil. Structure activity relations are discussed.

Interleukin (IL)-5 regulates the growth, differentiation, and activation AB of eosinophils. When activated, eosinophils release an array of proinflammatory and cytotoxic products and act as prominent effector cells in the process of allergic inflammation. Depriving eosinophils of IL-5 may therefore represent a viable approach to treat allergic disorders. This study describes the identification of R146225, a novel six-substituted azauracil derivative, as a potent, orally active inhibitor of IL-5 biosynthesis, capable of reducing pulmonary eosinophilia in mice. In vitro, R146225 inhibited IL-5 protein formation by activated human whole blood (IC50 = 34 nM), human peripheral blood mononuclear cells (IC50 = 24 nM), and murine spleen cells (IC50 = 6 nM). In contrast, the compound enhanced generation of interferon- γ and had little or no inhibitory effect on the production of IL-2 and IL-4. Reverse transcription-polymerase chain reaction anal. of stimulated whole blood cells indicated R146225's ability to down-regulate IL-5 mRNA expression. In vivo p.o. administration of R146225 (2.5 mg/kg) to mice before an i.v. anti-CD3 antibody challenge reduced IL-5 but enhanced interferon-y serum levels, without affecting IL-2 and IL-4 production Analogous to the in vitro results, R146225 suppressed splenic IL-5 mRNA expression, while message levels of the other cytokines remained unchanged. Moreover, p.o. dosing of R146225 (0.6-2.5 mg/kg) dose dependently reduced the pulmonary accumulation of eosinophils induced in mice by an intranasal instillation of Cryptococcus neoformans. Based on these data, R146225 may be useful in the therapy of eosinophil-driven allergic conditions.

The title compds. [I; p = 0-4; X = 0, S, NR5, a direct bond; Y = 0, S, AB

NR5, SO2; R1 = alkyl, halo, polyhaloalkyl, etc.; R2 = Hetl, cycloalkyl, alkyl, and if X = 0, S, NR5, then R2 may also represent aminocarbonyl, aminothiocarbonyl, alkylcarbonyl, etc.; R3, R4 = H, alkyl, cycloalkyl; R3R4 = alkanediyl; R5 = H, alkyl; Hetl = (un)substituted heterocycle], useful for treating eosinophil-dependent inflammatory diseases, and marking a receptor, were prepared and formulated. E.g., a multi-step synthesis of 1,2,4-triazine-3,5(2H,4H)-dione II which showed 90.5% inhibition of IL-5 production, was given.

AB The title compds. [I; R1 = (un)substituted hydrocarbon; X = CO, CS, an optionally substituted CH2; dashed line = optional double bond] prepared in an industrial manner conveniently and simply in high yield by cyclizing semicarbazone derivs. represented by R1N(N:CR2R3)CONHCH2CH(OR4)2 (R2, R3 = H, an optionally substituted hydrocarbon, an electron withdrawing group; R4 = an optionally substituted alkyl) (II). II are prepared by reacting hydrazone derivs. represented by R1NHN:CR2R3 with dialkoxyethyl isocyanates represented by (R4O)2CHCH2NCO. I are useful as herbicides, pesticides, parasiticides, and veterinary drugs (no data). Thus, 1-benzylidene-2-[4-(4-chlorobenzyl)-3,5-dichlorophenyl]-4-(2,2-diethoxyethyl)semicarbazide was cyclized in the presence of 35% HCl to give 90% 2-[3,5-dichloro-4-(4-chlorobenzyl)phenyl]-4,5-dihydro-1,2,4-triazine-3(2H)-one, which was oxidized by H2O2 to give 85% the title compound (III).
